Perfect IT security for your mobile companion

G DATA mobile apps for smartphones and tablets

Times have changed

Who would have thought five years ago that we would be monitoring our health with a watch or would be able to protect our homes with our telephones? Who would have predicted that our mobile devices would one day be giving us shopping tips or enable completely new possibilities for using media?

And who would have dreamt that an entire generation would never own a desktop PC and would never bother subscribing with a cable provider? Five years ago, the mobile revolution was still in its infancy; today it is growing at a rapid rate and nobody knows if and when it will stop.

2015 at a glance

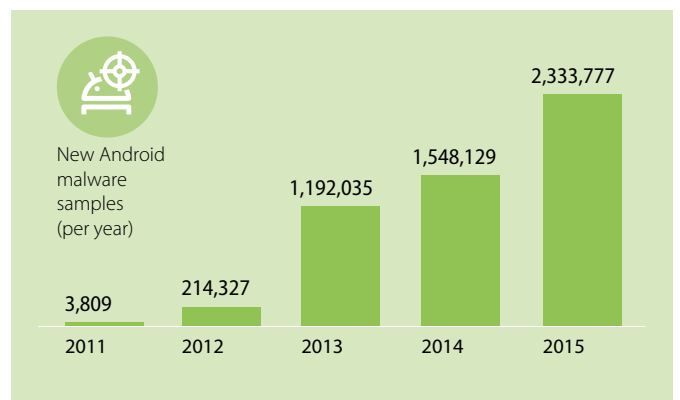

- At the end of 2015, 67 percent of all smartphones in Germany had an Android operating system installed on them. Worldwide 66 percent of users use a mobile device with an Android operating system.
- 2,333,777 new Android malware instances were discovered by G DATA security experts in 2015 as a whole. Compared to 2014, this is an increase of over 50 percent.
- Hence it is important for users of Android smartphones and tablets to keep their operating system fully up to date all the time, as security holes in Android are being found and exploited by criminals faster and faster.
- Hence G DATA security experts advise updating to the latest version of Android as a matter of urgency. When buying a new mobile device, be sure to check that the current version of Android is installed, as in many cases involving supposed bargains there are no longer any updates available for the out-of-date version.
- Mobile banking Trojans are becoming ever smarter. The number of people carrying out banking transactions on their mobiles is rapidly increasing. Cyber criminals are upgrading and distributing ever more sophisticated malware in order to specifically target banking customers.

The current situation: a new Android malware strain appears every 11 seconds

In 2015 the number of new Android malware variants increased substantially once again. G DATA analysts counted a total of 2,333,777 new malware instances, a sad record. There were 758,133 in the fourth quarter alone, representing an increase of no less than 32 percent compared to the previous quarter. Compared to 2014 (1,548,129), this was an increase of over 50 percent, and the upwards trend is continuing.

G DATA Mobile Internet Security

Quickly buying T-shirts via a tablet, downloading a recipe for the evening meal and using a smartphone to check emails and Facebook – G DATA is there with

you for your entire mobile life, so staying carefree while out and about is no longer a luxury.

Mobile Internet Security for Android

Android devices make everyday life easier. Yet the more popular an operating system is, the more interesting it becomes for cyber criminals as well. With G DATA Mobile Internet Security, your Android smartphone or tablet is in the best hands.

Phishing protection	Dangerous, bogus websites are immediately detected and blocked. For safe surfing, banking and shopping – even when out and about
Malware scanner	No malicious software: protection all the time against every current threat, thanks to the scanner's Cloud connection
Theft protection	If the SIM card is changed without authorisation, you can lock or delete your smartphone remotely
Location and alarm	Locate a lost or stolen device via the Internet
App checking	Checks your apps' permissions and detects whether you are secure or secretly being spied on
Age-appropriate surfing	You decide which websites your child is allowed to visit, with integration of the child protection portal Frag-finn.de
Usage monitoring	You decide which apps your child is allowed to use when and for how long
SMS and call filters	Only talk to people you trust on the phone. Also protects against unsolicited and dangerous SMS
Protected contacts	Hide important contacts in a secure, password-protected area. Any data, messages and call lists associated with these contacts can only be accessed by you
Password protection for apps	Set a password for important apps, so only people in the know can access them. Prevent costs from unwanted videos or in-app purchases this way

Mobile Internet Security for iOS

Access everything the digital world has to offer on your iPhone or iPad. And so you do not encounter criminals on the net when you do so, G DATA Mobile Internet Security transforms the Internet into a safe, worry-free place for you.

Surfing and phishing protection	Our browser offers the best protection against the latest threats
Location if the device is lost or stolen	Enables your iOS device to ring loudly via the G DATA Action Center – even in silent mode
Message if SIM card is changed	You receive an SMS as soon as the SIM card in your iOS device is changed
Notification when the battery level is low	Before your device shuts down, its last location is sent to the G DATA Action Center
Security for your children	The secure browser ensures that your children can only visit suitable sites
Jailbreak detection	G DATA checks whether your system has been manipulated and prevents secret spying on contact data or logging keyboard input etc.

The G DATA add-on modules

For even greater convenience in your mobile online life, use G DATA Secure Chat, the QR Code Scanner and the VPN module (in-app purchase with monthly/yearly subscription options). All add-on

modules also run on the free lite version of G DATA Mobile Internet Security and will also soon be available for devices with iOS operating systems.

G DATA Secure Chat

What is private, stays private. It is as simple as that. Secure Chat protects your dialogue with friends or group chats from prying eyes. Stick with your own kind: thanks to the encrypted connections, hackers and data thieves cannot infiltrate your chats.

Keep control of sensitive data: with G DATA Secure Chat you can automatically delete chats and photos on both your and the recipient's device. An incorruptible alternative to conventional instant messaging services.

G DATA VPN

Free Wi-Fi is as commonplace in public places these days as the foam on a cappuccino. Whether in a café, at an airport or in a hotel, Wi-Fi is everywhere. So protect your data even in public networks and do not let criminals see it. This will keep your emails, banking transactions and surfing habits secret.

For greater security – at home and on the move. The VPN module also enables video streaming and, if required, compresses incoming and outgoing data packets, thus reducing your data volumes. The clever solution for people who like to go online anywhere.

G DATA QR Code Scanner

A key to a public WLAN, a calendar entry or a business card – all sorts of things can be hidden behind the black and white square of a QR code – including viruses and dangerous websites unfortunately.

The G DATA QR Code Scanner detects these instances, warns you, blocks access and, unlike other scanners, is advertising-free.
